

Rehydration Treatment

Uses

This medicine contains glucose and various salts which act to relieve short-term (acute) diarrhoea and replace lost salts and fluids, in order to prevent dehydration.

Dosage

12 years and over: 1 or 2 sachets dissolved in water after each loose bowel movement.

Children 1 to 11 years: 1 sachet dissolved in water after each loose bowel movement.

Under 1 year: not to be given unless instructed to by a doctor.
