Salactol Collodion Wart Paint

Uses

For the topical treatment of warts, verrucas, corns and calluses.

Dosage

Adults, elderly and children: apply once daily, usually at night. It can take up to 12 weeks for resistant lesions to disappear. Soak the affected site in warm water and pat dry. Gently rub the surface of the wart, verruca, corn or callus with a pumice stone or emery board to remove any hard skin. Using the applicator provided, carefully apply a few drops of Salactol to the lesion, allowing each drop to dry before applying the next one. Take care to localise the application to the affected area. Verrucas should be covered with an adhesive plaster. Leave for 24 hours. Repeat the procedure daily, after first removing any plaster.

Format and Ingredients

Paint containing:
Lactic Acid 16.7% w/w, Salicylic Acid 16.7% w/w,

Category:
Skin care & antiseptics

Manufacturer:
Dermal Laboratories Limited

Pack size: 10ml
