

Vitamin E Suspension

100mg/ml

Uses

For the correction of vitamin E deficiency occurring in malabsorption disorders (i.e. cystic fibrosis, chronic cholestasis and abetalipoproteinaemia).

Dosage

Cystic fibrosis: Adults: 100-200mg per day. Children 1 year and over: 100mg per day. Children under 1 year: 50mg per day.

Abetalipoproteinaemia: Adults and children: 50-100mg per kg per day.

Infants with vitamin E deficiency which is secondary to chronic cholestasis may be treated with doses of 150-200mg/kg per day.
