

Maloff Protect

Uses

For prevention of P. falciparum malaria in adults, alongside bite prevention. Because Maloff Protect is effective against drug sensitive and drug resistant P. falciparum, it is especially recommended where the pathogen might be resistant to other antimalarials. Official guidelines (e.g. WHO and public health authority guidelines) and local information on the prevalence of resistance to antimalarial drugs should be taken into consideration.

Dosage

Adults: 1 tablet a day at the same time with food or a milky drink to ensure maximum absorption. Do not crush. Start taking 1-2 days before entering a malaria-endemic area and continue during the period of the stay and for 7 days after leaving the area. Use for a maximum of up to 12 weeks. Not recommended for people weighing less than 40kg. See SPC for more information about this product, including risk minimisation materials, adverse reactions, contraindications, warnings, precautions and interactions.

Format and Ingredients

Tablet containing:
Atovaquone 250mg, Proguanil Hydrochloride 100mg,

Category:
Travel health

Manufacturer:
GLENMARK PHARMACEUTICALS EUROPE LTD
